

Prevent Attacks With 24/7 Threat Visibility

The award-winning BOSS (Business Operation Security Suite) Security Operations Platform provides an unprecedented 24/7 holistic view no one else can offer. It relays consistently reliable data on risks and threats by mapping your entire digital environment and tapping into the world's best proprietary threat intelligence database. The patented BOSS responds to the increased demands of organizations to leverage limited resources cost-effectively while balancing operational risk management, cybersecurity, and threat response.

A Security Solution Tailored to Your Unique Demands

Speed, context, and consistency are critical to effective cybersecurity. BOSS enables our Security Operations Center (SOC) team to provide you with all three more effectively than anyone else.

- Deploys faster and easier than any other platform on the market
- Reduces overhead with an agentless approach to discovery and data collection
- Delivers unprecedented 24/7 visibility into your entire environment
- Uncovers hidden vulnerabilities that can expose you to cyber threats
- Prevents breaches and other attacks with 24/7 monitoring
- Enables better decisions with intel from external and proprietary global feeds

The Benefits of Reliable Threat Intelligence and Solutions

Using NIST and other major cybersecurity guidelines as a foundation, BOSS and our SOC team categorize, analyze, and compare your risks in relation to your people, processes, and tools. The actionable information provided by BOSS focuses on supporting effective, risk-based decision making at every level of your organization.

Identify: Our discovery appliance (physical or virtual) collects data from every endpoint on your network. It then safely transfers the customer information through the encrypted BOSS pipeline for storage in customer-specific silos on our secure private cloud.

Protect: We determine and outline tailored safeguards to ensure your business continuity. This includes your security maturity, which provides insight into your current capabilities and gaps for future growth.

Detect: The BOSS platform detects any unusual activity throughout your IT infrastructure.

Respond: We take immediate action to fully understand the extent of vulnerability and risk during a cybersecurity incident. Then we contain the impact and help customers recover.

Recover: We deliver a detailed, cause/effect analysis of any incidents to share with executives.
