

Maximize Crypto Mining Productivity. Prevent Downtime Before It Happens

Prevent critical server failures and avoid unexpected downtime and millions of dollars in potential lost revenue. UncommonX helps cryptocurrency hosting facilities and miners maximize productivity by preventing downtime before it happens.

Our BOSS threat and intelligence SaaS platform gives our Security Operations Center team precise and unprecedented visibility into your entire environment. So we can detect intermittent and hard server failures, security threats, and other major issues instantly – and react just as fast.

Maintain Peak Efficiency and Protect Your Company

Get the exact security and efficiency you need exactly when you need it:

- Prevent downtime with “on/off/failing” monitoring so techs can replace bad servers
- Stop risks and inefficiencies before they happen instead of just reacting to them
- Find vulnerabilities by mapping and baselining every device on your network
- Get complete situational engagement, not just alerts, with 24/7 monitoring
- Our U.S. specialists perform threat hunting on our software (no outsourcing)
