

Protect Patient Data by Stopping Cyber Attacks Before They Happen

Cyber attacks are happening almost daily, and the healthcare industry is one of the most vulnerable. All it takes is one small gap in your network to expose yourself to a loss of valuable patient records or a total shut down, which can risk lives. UncommonX delivers unmatched 24/7 protection by uncovering threats as they arise.

Healthcare Security Threats Are Getting Worse

- Data breaches average once a day, affecting 27 million patient records
- A single data breach can cost a company close to \$3.7 million
- The fastest growing type of attacks is ransomware
- Ransomware can shut down entire networks and medical devices
- 2020 had the most ransomware attacks since 2015
- 48% of U.S. hospitals shut down networks in early 2021 due to ransomware

Get the Exact Security You Need Exactly When You Need It

Using our patented BOSS threat and intelligence SaaS platform, our Security Operations Center (SOC) team provides the in-depth context-based intelligence you need to protect you from the inside out.

- Stop threats before they happen instead of just reacting to them
- Receive more in-depth insight about your risks as they arise to help you stay safer
- Uncover and patch vulnerabilities and defective devices in less time
- Get faster, more effective responses to threats and incidents
- Make better risk decisions with real-time data most meaningful to you
- Accurately identify your security maturity and risk levels based on NIST and other major cybersecurity frameworks
