UNCOMMONX

Get the Exact Security You Need, Exactly When You Need It.

You never know when a breach could happen, so you need always-on protection. With 24/7 Managed Security Services from UncommonX, we've got you covered. Our proven end-to-end services are supported by deep human expertise and driven by our innovative threat and intelligence SaaS platform, BOSS.

From threat protection to compliance, assessments to support, we anticipate your security needs and provide unmatched digital protection — even before you realize you need it.

Security & Threat Monitoring   **Security Assessments**   **24/7 Incident Response**

Full-Service Tech-Driven Security, at Your Service

Improved Threat Protection: Enables 24×7 visibility of external and internal threats using BOSS.

Enhanced Security Maturity: Ensures proactive risk management and security maturity with comprehensive threat intelligence.

Facilities Compliance: Provides enhanced security controls and real-time information ensuring industry regulations compliance.

Improved Operational Efficiency: More effective monitoring of your environment identifies where performance can be improved.

Tailor Your Protection with the Services You Need

Our Security Operations Center (SOC) team leverages BOSS to provide the concierge-level managed services, secure technology, and proven expertise you need.

Collection and Monitoring of Security Event Data – Our data ingestion engine is deployed and gathers all necessary security event data.

Security Event Triage and Investigation – Identifies active attacks and hidden threats before they can do real damage.

Security Analytics and Intelligence – BOSS correlates all security event data for anomalies and possible compromise.

Incident Escalation – Incidents are escalated to each customer based on their standard service-level agreement.

Security Assessments – Get a clear view of your organization's security posture with a series of assessments.

Incident Response Support – Identifies and fixes the cause of all cyber-attacks, and then minimizes the damage and costs.

Security Reporting – Sends daily summary reports of event information, including status reports, tickets open, closed, or escalated.
