

Recover From Cyber Attacks and Get Back to Business FAST!

Cyber attacks are like forest fires. The faster you stop it, the less damage they cause. That's what we help you do. Any day. Any time. 24/7. Using our patented BOSS threat management and intelligence SaaS platform, our world-class Security Operations Center (SOC) team pinpoints the cause of attack – and contains it fast!

That way, you can:

- Get back online quickly and conducting business again
- Minimize the potential damage and costs of the cyber-attack
- Recover securely without losing valuable evidence
- Prevent future assaults by fixing the cause of the attack

UncommonX Puts the Action Into Incident “Reaction”

We contain attacks effectively because we react quickly. Our SOC security team follows our proven integrated process to protect your business:

- **Preparation:** Define a customized response strategy for your specific incident
- **Detection:** Confirm whether an attempted breach or some other incident actually occurred
- **Containment:** Limit the impact, mitigate damage, and verify data gathered during detection
- **Analysis:** Identify how the incident occurred and implement a digital forensics investigation

- **Eradication:** Restore affected systems and remove the causes of the incident
- **Recovery:** Verify systems are secure and expedite the resumption of business operations
- **Follow-up:** Provide a final report with details of the incident and how it was contained

Don't Wait For An Attack. Stop Them Before They Happen.

Be proactive, not reactive. We can help recover from an attack, but why wait and risk potential damage and loss? Instead, work with us to uncover internal issues and potential threats now. That way you can better prevent threats and attacks before they happen.
