

Are You Protected From A Ransomware Attack? Find Out.

Ransomware can shut down your business by blocking access to your entire system. Attacks in 2021 were more than double that of 2020. Make sure your organization is fully protected from this constantly rising threat.

Get a ransomware readiness assessment. It uncovers vulnerabilities that can expose you to an attack. Then you'll receive a comprehensive report with a clear plan-of-action on how to strengthen your protection, improve related efficiency, and lower costs.

How A Ransomware Readiness Assessment Helps

Leveraging our next generation BOSS (Business Operations Security Suite) XDR threat management and intelligence platform, our security team conducts a deep dive review of your infrastructure to provide these benefits:

- Reduce the threat of ransomware by uncovering vulnerabilities
- Lower the risk of losing critical data and millions of dollars
- Evaluate the efficiency of your existing incident response plan
- Learn how to strengthen your security processes and technology
- Spend a lot less on proactive defense vs. responding to an attack

Find Out How Safe You Really Are. Call Us.

Schedule an assessment today. Find out how safe you really are and how much safer you can be. Call **866-405-9156**, email us at sales@uncommonx.com, or scan the QR code to visit UncommonX.com.
